LISTING OF CLAIMS

This listing of claims will replace all prior versions and listings of claims in the Application.

1.   (Original): A method of accessing a form application via networkable media in a wireless client device, comprising the steps of:

(a)   selecting at least one form option for execution on the wireless client device; and

(b)   using the form application to communicate transmissable media content *number of characters* via a wireless medium based on the at least one form option.

2.   (Original): The method of claim 1, further comprising the step of :

(c) selecting at least one of a brief form option, a full form option, a create form option, a modify form option, a delete form option, a forward form option, a fax form option, and a send form option.

3.   (Original): The method of claim 1, further comprising the step of :

d) communicating via at least one of a Bluetooth protocol, a Wireless Application protocol, a Global System Mobile protocol, and a Wireless Markup Language protocol.

4.   (Original): The method of claim 1, further comprising a step of:

e) presenting the transmissible media content to a user according to at least one presentation option.

5.   (Original): The method of claim 4, wherein the presentation options comprises at least one of facsimile form, memorandum form, invitation form, and user profile form.

from + application

6.   (Original): The method of claim 1, wherein the transmissable media content comprises at least one of user data, address data, memo data, and search data.

7.   (Original): The method of claim 1, further comprising a step of :

f) communicating the transmissable media content from a data source remote from the wireless client device.

8.   (Original): The method of claim 1, wherein the form application comprises at least one form and at least one related subform.

9.   (Original): A system for accessing a form application via networkable media in a wireless client device, comprising:

an input interface that accepts at least one form option for execution on the wireless client device; and

a processor unit, communicating with the input interface, that communicates transmissable media content via a wireless medium based on the at least one form option.

10.   (Original): The system of claim 9, wherein the processor unit is configured to select at least one of a brief form option, a full form option, a create form option, a modify form option, a delete form option, a forward form option, a fax form option and a send form option.

11.   (Original): The system of claim 9, wherein the communicating of the transmissable media content comprises communicating via at least one of a Bluetooth protocol, a Wireless Application protocol, a Global System Mobile protocol, and a Wireless Markup Language protocol.

12.   (Original): The system of claim 9, wherein the processor unit, connected to the input interface, is configured to present the transmissible media content via a display screen of a wireless client device to a user according to at least one presentation option.

13.   (Original): The system of claim 12 wherein the presentation options comprises at least one of facsimile form, memorandum form, invitation form, and user profile form.

14. (Original): The system of claim 9, wherein the transmissable media content comprises at least one of user data, address data, memo data, and search data.

15. (Original): The system of claim 9, wherein the transmissable media content is transmitted from a data source remote from the wireless client device.

16. (Original): The system of claim 9, wherein the form application comprises at least one form and at least one related subform.

17. (Original): A system for accessing a form application via networkable media in a wireless client device, comprising:

input interface means for accepting at least one form option for execution on the wireless client device; and

processor means, communicating with the input interface means, the processor means configured to use the form application to communicate transmissable media content via a wireless medium based on the at least one form option.

18. (Original): The system of claim 17, wherein the processor means is configured to select at least one of a brief form option, a full form option, a create form option, a modify form option, a delete form option, a forward form option, a fax form option and a send form option.

19. (Original): The system of claim 17, wherein the communicating of the transmissable media content comprises communicating via at least one of a Bluetooth protocol, a Wireless Application protocol, a Global System Mobile protocol, and a Wireless Markup Language protocol.

20. (Original): The system of claim 17, wherein the processor means, connected to the input interface means, is configured to present the transmissible media content via

a display means of a wireless client device to a user according to at least one presentation option.

21.   (Original): The system of claim 20 wherein the presentation options comprises at least one of facsimile form, memorandum form, invitation form, and user profile form.

22.   (Original): The system of claim 17, wherein the transmissable media content comprises at least one of user data, address data, memo data, and search data.

23.   (Original): The system of claim 17, wherein the transmissable media content is transmitted from a data source remote from the wireless client device.

24.   (Original): The system of claim 17, wherein the form application comprises at least one form and at least one related subform.

25.   (Original): A storage medium for storing machine readable code, the machine readable code being executable to operate a form application via networkable media in a wireless client device, the storage medium comprising:

selecting code that selects at least one form option for execution on the wireless client device; and

communicating code that uses the form application to communicate transmissable media content via a wireless medium based on the at least one form option.

26.   (Original): The storage medium of claim 25, further comprises option selecting code that selects at least one of a brief form option, a full form option, a create form option, a modify form option, a delete form option, a forward form option, a fax form option and a send form option.

27.   (Original): The storage medium of claim 25, further comprising protocol communicating code that communicates via at least one of a Bluetooth protocol, a

Wireless Application protocol, a Global System Mobile protocol, and a Wireless Markup Language protocol.

28. (Original): The storage medium of claim 25, further comprising presenting code that presents the transmissible media content to a user according to at least one presentation option.

29. (Original): The storage medium of claim 28 wherein the at least one presentation options comprises at least one of facsimile form, memorandum form, invitation form, and user profile form.

30. (Original): The storage medium of claim 25, wherein the transmissable media content comprises at least one of user data, address data, memo data, and search data.

31. (Original): The storage medium of claim 25, further comprising remote communicating code that communicates the transmissable media content from a data source remote from the wireless client device.

32. (Currently Amended): The storage medium of claim ~~24~~ 25, wherein the form application comprises at least one form and at least one related subform.

33. (New): The method of claim 1, wherein the selected at least one form option has at least two predetermined fields.

34. (New): The method of claim 33, wherein one or more of the at least two predetermined fields is automatically pre-filled.

35. (New): The method of claim 1,wherein the at least one form option is selected by a user from a plurality of different form options each including a plurality of predetermined fields.

-6-

36.   (New):   The method of claim 1, wherein the at least one form option is selected from a plurality of different form options, and each of the plurality of different form options is associated with at least one communication type.

37.   (New): The method of claim 1, wherein the at least one form option is selected by selecting a communication type from a plurality of different communication types.

38.   (New): The method of claim 1, wherein the at least one form option is selected by selecting a type of receiving terminal from a plurality of different types of receiving terminals.

39.   (New): The method of claim 38, wherein the type of receiving terminal is at least one of a facsimile, a computer terminal, and a wireless device terminal.

40.   (New): The method of claim 1, wherein the selected at least one form option is a custom made form option created by a user.

41.   (New): The method of claim 1, wherein the step of using further comprises: creating a custom action associated with the selected at least one form option.

42.   (New): The method of claim 1, wherein the step of selecting further comprises:
        (c) selecting, for view by a user, one of an entire form option and a brief form option, wherein the brief form option only presents a portion of the selected at least one form option.

43.   (New): The system of claim 9, wherein the at least one form option has at least two predetermined fields.

44.   (New): The system of claim 43, wherein one or more of the at least two predetermined fields is pre-filled.

-7-

45.   (New): The system of claim 9,wherein the at least one form option is selected by a user from a plurality of different form options each including a plurality of predetermined fields.

46.   (New):   The system of claim 9, wherein the at least one form option is selected from a plurality of different form options, and each of the plurality of different form options is associated with at least one communication type.

47.   (New): The system of claim 9, wherein the form option is selected by selecting a communication type from a plurality of different communication types.

48.   (New): The system of claim 9, wherein the at least one form option is selected by selecting a type of receiving terminal from a plurality of different types of receiving terminals.

49.   (New): The system of claim 48, wherein the type of receiving terminal is one of a facsimile, a computer terminal, and a wireless device terminal.

50.   (New): The system of claim 9, wherein the at least one form option is a custom made form option created by a user.

51.   (New): The system of claim 9, wherein the input interface enables a user to create a custom action associated with the at least one form option.

52.   (New): The system of claim 9, wherein the input interface enables a user to select one of an entire form option and a brief form option, wherein the brief form option presents a portion of the at least one form option.

53.   (New): A system for communication on a wireless client device, comprising:

at least one forms module that enables a user to create and edit a document based on content added to a form option, wherein the form option is selected by the user from a plurality of form options on the client wireless device; and

at least one communication module that communicates the document from the client wireless device to one or more receiving terminals.

54.   (New): The system of claim 53, wherein the one or more receiving terminals includes at least one of a facsimile, a computer terminal, and a wireless device terminal.

55.   (New): The system of claim 53, wherein the one or more receiving terminals are other than wireless device terminals.

56.   (New): The system of claim 53, wherein the at least one forms module includes pre-stored form options.

57.   (New): The system of claim 53, wherein the at least one forms module includes pre-stored form options and enables the user to create custom form options.

58.   (New): The system of claim 53, wherein the at least one forms module enables a user to create custom form options.

59.   (New): The system of claim 53, wherein the at least one forms module enables the user to specify a form type and a plurality of form properties of a custom form option created by the user.

60.   (New): The system of claim 53, wherein the form option selected by the user includes at least two predetermined fields, wherein the first predetermined field includes content and the second predetermined field includes an action property, and wherein

the action property facilitates communication of the content of the first predetermined field to the one or more receiving terminals.

61.   (New): The system of claim 60, wherein the action property includes one of a Mail To property and a Dial Phone property.

62.   (New): The system of claim 60, wherein the action property is pre-stored in the second predetermined field.
